

MUSICA™ Technical Bulletin

Keypad Antenna

The *Musica* MU4602KP50-FM and MU5066KP50-FM feature a Digital FM tuner (DFMT). The DFMT is built in on the MU4602 and insertable on the MU5066. The DFMT is used for local room listening and includes an FM antenna for mounting between studs. It also includes an RG6 connection so you can connect an aftermarket FM antenna. To install the antenna, complete the following steps:

1. Connect the 3.5 mm jack on the FM antenna to the 3.5 mm jack on the PCB board of the keypad.

NOTE: For best reception, use a coax connection from an FM antenna mounted in the attic or roof.

2. Connect the dipole antenna **or** the RG6 from the antenna in the attic or structured cable box to the DFMT adapter (see Figure 1).

NOTE: Do not connect both the dipole and the RG6 to the DFMT adapter.
