The IP-Based Distributed Entertainment Company.

## PANVP700 Operation When *Panorama* is Integrated with *Musica*™

### Products Included:

PAN6400

PANVP700

PANVP500

*Musica* MU5066

The *Panorama* PANVP700 is designed to work with the *Panorama* Video Distribution Center (PAN6400) in either a standalone mode or in conjunction with third-party systems. However, when connected to a *Musica* system, having more than one IR receiver in a room for IR passthrough can lead to problems in communicating with video sources. Therefore, the IR IN port on a PANVP700 is automatically disabled when connected to a *Musica* system.

*NetStreams* recommends that you use a PANVP500 when installing a PAN6400 with *Musica*. In this configuration, IR is routed through the *Musica* KP50 or KP25 (refer to Figure 1).
