

DIGILINX™ Technical Bulletin

Matching Error on MLA4000 in *DigiLinX* Dealer Setup Program v.1.70.01

This technical bulletin describes an error encountered when trying to match a *MediaLinX* Pro MLA4000 in *DigiLinX* Dealer Setup program v. 1.70.01 and provides a quick solution to the problem.

Matching Error

When attempting to match an MLA4000 in Dealer Setup v. 1.70.1, the MLA4000 appears to be matched correctly. When saving the project and reopening the project, the MLA4000 is no longer matched and has a red X next to it. This occurs because the serial number has not been saved to the project file.

Matching Solution

To cause *DigiLinX* Dealer Setup v. 1.70.01 to save the serial number and match the device correctly, follow these steps:

1. Select the MLA4000 with the red X, and press the ID Devices button as shown in Figure 1 on the following page.
2. Change one number in the Serial Number box and then change it back as shown in Figure 1 on the following page. This will force Dealer Setup to add the serial number to the project file.
3. Select **Apply**. The serial number is stored and the MLA4000 is correctly mapped.
4. Save your project file.
