

Musica™ Distributed Audio System

Musica™ Distributed Audio System

- High quality amplified keypads
- 4 global source inputs
- 6 to 18 zones of audio
- Up to 18 local sources and up to 18 Digital FM Tuners (sold separately)
- Enhanced IR control capabilities
- 4 IR Emitters (included)
- Advanced RS-232 control for full integration with other control systems
- No PC required for programming
- Easy to Install
- Easy to use
- Control from a PC (optional IP control)
- Affordable
- Bullet proof reliability

NetStreams' Musica MU5066 Distributed Audio system builds on the award-winning Musica product line by introducing many new features for convenience and use, simpler install, with even better audio performance. Unmatched by comparable systems in the market, the Musica MU5066 Distributed Audio system features sophisticated control, simplified programming, intelligent muting, and an intuitive and interactive in-wall amplified keypad. The Musica MU5066ADC Audio Distribution Center (ADC) serves as the core of the Musica Distributed Audio system, distributing audio from four sources to as many as 6 rooms per ADC. Add a MU5066DFMT (Digital FM Tuner card) to any MU5066 keypad for local zone FM tuner listening as a fifth source. The Musica in-wall Audio Ports are highly flexible, allowing the output of the distributed audio to be coupled with a powered subwoofer or external amplifier, if so desired, as well as the input of a "local source" such as a TV monitor or computer. With additional ADC's, the system can expand to 18 zones of audio.
