NETSTREAMS INTRODUCES MUSICA 6-PACK PLUS: ALL-IN-ONE DISTRIBUTED AUDIO SYSTEM WITH UNIQUE FEATURES

**Including 4 global sources, 3 local FM tuners, iPod integration, easy installation
and high quality audio**

AUSTIN, TX – October 30, 2006 – Offering an technologically advanced, yet low cost multi-room audio solution, *NetStreams*[®], the global leader in networked entertainment systems and technology based on Internet Protocol (IP), has launched the ***NetStreams Musica*[™] 6-Pack Plus (model NS-MU5066P)**, an distributed audio system for residential and commercial applications. The new *Musica 6-Pack Plus* comes conveniently packaged in one box, and includes everything needed (save speakers & audio sources) for a four-source, six-zone Multi-Room Audio system including unique features such as 3 local FM tuners and 2 local sources. Offering greater convenience and ease of use, simpler installation, and superior audio performance over other bundled systems at a competitive price, the packaged system is available now.

“Our new *Musica 6-Pack Plus* package brings high quality and innovative features of our *Musica 5000* series product line to a segment of the Multi-Room Audio market previously untapped by *NetStreams*,” said *NetStreams* President and CEO Kevin Reinis. “Offering more power, more local sources, iPod integration and better audio quality than our competition at the same price point, the *Musica 6-Pack Plus* is an excellent choice for installers.”

IP-Based
Distributed
Entertainment
Company

The *Musica 6-Pack Plus* comes with six *Musica* 5000 series in-wall Keypads, three Digital FM Tuner Cards, two Audio Ports, and the Audio Distribution Center (ADC). A smartly designed package, the system places digital amplifiers in each room, behind each keypad, rather than in one central location. This improves sound quality by reducing noise, distortion and power losses as well as increasing reliability and simplifying the installation.

The *Musica* Audio Distribution Center provides connections for four (4) global audio sources and a number of built-in features for sophisticated control, simplified programming, and intuitive use. Installers will appreciate the fact that each keypad has enhanced IR capabilities for IR learning and easy programming. Simply learn the IR codes for the source component into the keypad, and it is automatically stored centrally in the *Musica* ADC, eliminating the tedious task of programming each keypad with the same information over and over again. Increased memory capacity for longer IR strings and advanced RS-232 control allows for seamless integration with third party control systems, if desired. In addition to IR capabilities, *Musica* offers discrete channel communication between each keypad and the Audio Distribution Center, for ease of installation.

From an end user standpoint, the most visible parts of the *6-Pack Plus* system are the in-wall amplified keypads, one for each zone and designed to match most room décor. The package offers a total of six amplified keypads, three MU5066KP25's with 25 watts per channel amplification and three MU5066KP50's with 50 watts per channel amplification. All keypads feature a wide-screen graphic LCD that aids in easy operation of the system with backlighting selection in blue and white, as well as an expansion slot for the included Digital FM Tuner Card for in-room FM Tuner listening.

The sound quality of each of the *Musica* MU5066 keypads is remarkable, thanks to the inclusion of a Texas Instruments® (stock symbol: TXN) Digital Amplifier and Burr-Brown® 192kHz, 24-bit D/A converters. The amplifier output can easily be customized for 8, 6, or 4-Ohm speakers in software on the keypads. All *Musica* MU5066 keypads feature a 5-band graphic equalizer for fine-tuning of the sound in each room. The MU5066KP50 keypad adds a special 3D Sound Mode to expand the sound stage in rooms where the speakers are placed closer together.

- more -

Both *Musica* MU5066 keypad models included with the *Musica 6-Pack Plus* package feature the ability to program macros – the MU5066KP25 features eight, four step macros and the top of the line MU5066KP50 features an additional 10 macros per source to total 48 macros.

All *Musica 6-Pack Plus* keypads in the package include *NetStreams'* proprietary “*Shh!*™ Technology,” featuring a gentle sleep timer so the volume level of the audio gradually decreases in the room as you drift to sleep, finally shutting off. Any keypad can now be used to turn one or all rooms ON or OFF with a touch of a button.

All *Musica* MU5066 Keypads give complete control of all aspects of the sound in the room, with the ability to listen to different sources in different rooms at the same time. Convenient when one person wishes to listen to one source in one room, and another person wishes to listen to another source in another room, for example.

The *Musica 6-Pack Plus* package also includes two Audio Ports for the easy addition of a local source, such as an iPod®, a TV, game station, DVD player or even a PC in the local room. Each also has an output, which allows you to connect a powered subwoofer.

As *NetStreams* is known for their innovations in IP-Based Distributed Entertainment, the Company also offers a module (sold separately) for IP-Based control of the *Musica 6-Pack Plus*. Dealers can easily add this MUR2EM network interface module to allow for the control of the MU5066 system from a PC, Wireless web tablet, or PDA (*web browser and Macromedia® Flash® required). This network interface module features an attractive pre-programmed user interface, an RS-232 connection (for ADC), and an Ethernet connection (network). The MUR2EM allows for seamless control of up to 18 rooms of audio (with multiple MUR2EM's in master/slave configuration). The *NetStreams Musica 6-Pack Plus* system is available to authorized dealers now.

About NetStreams

Headquartered in Austin, Texas, *NetStreams* is the world leader in digital entertainment networks, based on Internet protocol (IP) technology. *NetStreams'* IP-Based systems, are designed for residential and commercial use, and offer new levels of affordability, simplicity, reliability, and expandability, benefiting both installers and end-users with lower costs for installation and set-up, with an intuitive and rich user experience.

By utilizing its patent-pending *StreamNet*[™] technology, *NetStreams* systems enables true plug-n-play integration with other products for entertainment, automation, security, and communications. *NetStreams* is committed to utilizing cutting-edge human factors engineering to create entertainment systems that are truly user-friendly and future compatible. *NetStreams* is enabling the future of IP-Based entertainment today.
