NetStreams® To Showcase Award-Winning Lineup at EHX Spring 2005

Manufacturer of Whole-House Audio/Video Systems to Address TCP/IP's Growing Dominance in Home Entertainment at February Electronics Expo

Austin, TX – February 24, 2005 – *NetStreams, the leader in IP-based Networked Audio/Video distribution, will turn attention to the future of home entertainment at EHX Spring in Orlando, Florida. The company plans to focus on the ever-expanding capabilities of IP-based audio/video distribution by demonstrating its new **DigiLinX™** whole-house entertainment system, and by hosting a number of educational seminars. *NetStreams'* founder and CEO, Herman Cardenas will lead a course on IP-based entertainment, and the company will show the award-winning **DigiLinX** and **Musica™** systems, at **booth 524** in the Orange County Convention Center. The show floor during EHX Spring 2005 will be open from February 24 – 26.*

"IP-based communications lends incredible flexibility and versatility to home audio/video distribution," Cardenas said. "Custom installers are going to see considerable growth in IP-based technology in the next few years—not only in complete whole-house systems, but in a wealth of IP-compatible products from third parties. At EHX Spring, we'll give installers a look at how this is going to affect custom integration, and how they can help their customers take advantage of IP's truly revolutionary benefits."

On Tuesday, February 22, Herman Cardenas will host a training course entitled "**IP-based Networked A/V and the Future of Home Entertainment.**" The course is scheduled for 11 am, and will examine TCP/IP as a solution to the drawbacks of traditional audio distribution. Mr. Cardenas will demonstrate how TCP/IP is driving the convergence of home entertainment media on multiple platforms, and he'll provide dealers with practical measures for becoming competitive through this shift in application.

NetStreams will also host a 90-minute seminar called "**IP-based Multi-Room Audio Systems**" on Wednesday, February 23. The class will run at 9 am and 3:30 pm, and will spotlight **DigiLinX** as a leading force in the growth in TCP/IP in the home. *NetStreams* experts will explain why TCP/IP is the best protocol for providing superior quality sound and video in a system that expands to support emerging technology and fit homeowners' changing interiors.
