**NETSTREAMS' IP A/V SOLUTION SELECTED FOR AUDIO/ VIDEO DISTRIBUTION
BY MANPOWER INC. FOR NEW WORLD HEADQUARTERS**

**DigiLinX High Definition IP Audio / Video Solution Delivers on Promise of IT and
A/V Convergence**

AUSTIN, Texas, -- April 8, 2008 – **NetStreams**[®], the global leader in networked A/V systems based on Internet protocol (IP) standards, announced that **Manpower Inc.**, the worldwide employment services company, has awarded *NetStreams* the contract to provide the audio/video distribution system for its new corporate facility located in Milwaukee, Wisconsin.

NetStreams' **DigiLinX**[™] **Audio, Video and Control** system was chosen for the role of distributing and controlling the audio and video from 20 DirecTV[®] HDTV set top boxes and two PCs running digital signage software to 20 displays located throughout the 294,000sq. ft. facility. The new site can house more than 1,000 employees.

“We needed more than just a digital signage solution,” commented Victor Nightingale, Director of Global Technology & Engineering for Manpower. “*NetStreams'* DigiLinX solution allows us to distribute both the high definition video and the audio from a wide variety of sources over TCP/IP in the highest quality. With DigiLinX, Manpower corporate messages and DirecTV programming can be easily accessed and enjoyed in any of Manpower’s conference rooms, lobbies or employee cafeterias. Best of all, it is all IP-Based, so the distribution of audio, video and control coexist with our IT infrastructure.”

The
Ultimate
IP A/V
Experience

The installation was completed by InfoCor, a leading Milwaukee, Wisconsin based A/V systems designer and integrator.

Cheryl Anderson, President & CEO for Infocor, commented, "During the design phase it became evident that *NetStreams*' DigiLinX system was the most efficient and scalable solution because of its ability to distribute a variety of sources (A/V and PC-based digital signage) over the corporate IT network. We were able to save on the cost of cabling as well, since the audio and video are all distributed over one CAT5e cable."

The NetStreams IP Video solution distributes high definition, lossless audio, video, and control over the network, intelligently managing the streams to deliver stunning high definition video and highest quality audio, while coexisting with other network traffic. Additionally, the solution scales with any IP network, providing practically unlimited sources and zones. Furthermore, because the system is using standard network cabling, CAT5e or fiber, installation can be started at virtually any point in the construction of a facility.

Manpower's installation used Dell's PowerConnect family of products for its network infrastructure. The Dell switches provide advanced capabilities including full IGMP support, and fiber interconnects necessary to meet the requirements of a large-scale deployment. Additionally, by using traditional IP network infrastructure to distribute high quality audio/video IT organizations can now manage data, voice, and video together, a job that was previously impossible due to the proprietary nature of legacy audio/video distribution networks.

"We're excited that *NetStreams* IP-Based Audio/Video solution could be a part of Manpower's new world headquarters," commented Petro Shimonishi, Vice President of Commercial Sales for the company. "Our solutions exceed the performance of legacy technologies and provide the added benefit of building on the network foundation that is found in virtually every corporate environment worldwide."
